

## Summerize of an Article

First, I would say that I 'm doing this work on my computer because I don't have any printer or scanner at home.

Then, I 'm asking you to trust me If I 'm telling you that I didn't use Google to help me. I think that my large number of mistakes will plead guilty for me;)

And Finally, I chose an article from the Guardian and not The Independant as you asked us, because I found it when I was surfing the net and I found it very interesting.

### The summerize :

This document is an article extracted from The Guardian, written by Alex Hern, entitled « **5G confirmed safe by radiation watchdog** » on the 12th of March 2020.

It deals with the consequences of the 5G on the health of every people, especially the danger of the Electro Magnetic Field (EMF) on bodies. The International Commission on Non-Ionizing Radiation Protection (ICNIRP), which is an international laboratory studying the effect of radiations on the body, tells that it is a safe technology

Dr Eric van Rongen understands that people are afraid by this kind of EMC field but according to him, there is no danger. Dr Jack Rowley, the senior director for research and sustainability at GSM association, tells us that it is no more dangerous to us 5G than other phones or way to communicate. Infact, the guidelines follow the rules established in 1998 when it was the GSM booming.

It was, apparently, a very high level of protection. They even say in the article that 5G waves are less coming through the skin and stay out of the body.

So to resume, according to them, this is not dangerous and we don't have to be sceptic.

### After the summerize, my opinion :

In my opinion, they are in a better place than me to judge if 5G is dangerous or not. They are scientists.

But when I noted that there is a GSM Association scientist who is interviewing, I can't stand thinking that it's like a nutritional doctor that tells every body that McDonalds is a good way to lose weight. According to me, this is not an objective opinion, because if he said « yes, 5G can make your hair fall, and give you a skin cancer », the GSM Operator would have literally hanging him.

It's not a new thing : EMC are not good for human body, and even the 5G looks like very attractive technology, nobody can only stay with what they use. The 5G have been created only because people want IOT, so with that, it will be easier to put the Internet in a car.

To me it's too much. But I don't suppose that corona virus can be a result of 5G as it's written. It's ridiculous. But it's a very dangerous thought to me and when I read an article in a famous newspaper that doesn't nuance the effects on people's bodies, I hang on thinking that we are leading by consumption and advertising.

Infact we are living with all these new technologies every day, and it will continue to evolve. But despite of human being health. And we can also speak about animals, which are not as strong as human. What with the bees are less and less, what will arrive to them ?

If you have an opinion on it, it would be a pleasure to speak about this subject with you.
